EQUITY UPDATE

- Nifty 50 (-2.0%) drifted down due to global macro challenges and strong US inflation leading to markets anticipating higher, longer rates. Corporate results clearly indicated some slowdown in discretionary consumption.
- Mid-cap and small-cap indices were down by nearly 2% and 4%, respectively. Sector-wise, power (-16%), metals (-10%) and oil & gas (-9%) declined the most, while FMCG and capital goods were the only indices to close in green.
- Globally, Hong Kong (-9%), Brazil (-7%) and US Dow Jones (-4%) lost the most, while France (+3%), Germany (+2%) and Taiwan (+2%) gained the most.

Global Macros

- The US Federal Open Market Committee, in line with market expectations, hiked the target range for the federal funds rate by 25 bps (basis points).
- The US 10-year bond yield expanded 41 bps during the month to end at 3.92%.
- Dated Brent crude spot price declined to US\$82.5/bbl from US\$85.4/bbl and future prices declined to US\$83.9/bbl from US\$84.5/bbl.

Domestic Macros

- **Growth:** India's manufacturing sector expanded at the slowest pace in four months in February 2023. The seasonally adjusted S&P Global India Manufacturing Purchasing Managers' Index (PMI) was at 55.3 in February 2023, little-changed from 55.4 in January 2023. The headline figure was above its long-run average of 53.7. Services PMI (59.4 vs. 57.2 in January 2023) expanded at the strongest rate in 12 years in February 2023 supported by favourable demand conditions.
- **Credit Growth:** As per latest RBI data, system credit growth stood at a healthy 16.1% YoY for the fortnight ended Feb 10, 2023. So far, credit growth has been driven by continued and sustained retail credit demand, strong growth in NBFCs, and inflation-induced working capital requirement.
- **Inflation/policy:** January 2023 Consumer Price Index inflation surprised sharply on the upside at 6.52% from 5.72% in December 2022 led mainly again by sharp rise in cereal prices. January 2023 Wholesale Price Index inflation moderated further to 4.73% from 4.95% in December 2022 led by moderation in fuel and power, and manufactured products' inflation.
- **Currency:** USD-INR movement came under pressure amid a resurgence in Dollar strength, INR has depreciated by around 1.1% to Rs. 82.85/US\$ (as on February 27, 2023) - levels not seen in more than a month.
- **GST Collection:** GST revenue collection in the month of February 2023 stood at Rs 1.49 lakh crore, up by around 12% on an annual basis. With this, the monthly GST revenues remained over Rs 1.4 lakh crore for 12 straight months in a row.

Regulatory, policy and market developments

- **Equity trading trends:** FPIs sold US\$ 671 million (until February 28, 2023) worth of Indian equities in the secondary market, while DIIs bought US\$ 2.3 billion (until February 28, 2023).

3QFY23 interim results

- **Modest quarter; dragged by global cyclicals:** India Inc.'s profitability moderated in 3QFY23. Corporate earnings were below expectations (Nifty 50 earnings grew by 11% YoY) during the quarter dragged by commodities while Financials and auto held the fort. Broad-based slowdown in Consumption, both Staples and Discretionary, also hit corporate earnings.

Sector-wise summary

- **Technology:** In-line quarter – Tier-1 companies revenue growth outperformed vs. Tier-2 after six consecutive quarters of underperformance.
- **Banks:** Reported a resilient 3Q fuelled by healthy loan growth, robust margin expansion, and consistent improvement in asset quality. Growth trends were broad-based, with the corporate segment too exhibiting a strong recovery. Public Sector Banks posted an improvement in their operating performance driven by strong 3-6% QoQ loan growth across banks amid a sharp recovery in the corporate segment.
- **Automobiles:** Volumes in 3Q grew YoY across segments, except 2 Wheelers. It was underpinned by improvement in the supply of semiconductor chips and strong order book, especially in case of passenger vehicles.
- **Consumer:** Discretionary demand witnessed slowdown post festive season while FMCG is yet to benefit from rural recovery. Overall revenue growth was driven by value, as volume growth remained soft. Commodity costs showed signs of stabilization (albeit at high levels in some cases) or decline in some cases.

Outlook

- The market narrative of peaking inflation and reduction in interest rates remains, however with inflation being slow to budge, the timing of interest rate decline could be a bit delayed. In the interim, focus shall be on the (a) likely slowdown of the global economy and (b) pace of China re-opening.
- **Cyclical rebound helping India:** Equity markets have faced 4 consecutive shocks in the recent years: 1) COVID, 2) High inflation, 3) Geopolitics (Russia-Ukraine war) and 4) Sharp rise in interest rates. Indian economy has been able to withstand these shocks relatively better vs. other economies. This is led by a) Cyclical upturn in many sectors (Real estate, Auto, Banking, Telecom etc), b) Manufacturing tailwinds led by China+1 & PLI, c) Capex recovery (India Inc. Balance Sheets have strengthened) and d) Consolidation (formalization).
- **Key things to watch out on the domestic front:** Would be (a) monsoon forecast and pace of rural recovery, (b) corporate earnings momentum and (c) government spending focus (in the run-up to 2024 general elections).
- **Coming to outlook:** The recent budget despite being a pre-election budget turned out to be prudent with focus on infra spend and fiscal consolidation. We continue to remain constructive on equities and believe India is on the cusp of achieving robust growth over the next few years. Higher capex provisioning and benefits from PLI (potentially can add 1.5% to GDP over the next 5 years) could potentially revive capex across the sectors, boost employment as well as credit growth. Nevertheless, Indian markets witnessed volatility over the last few weeks. The recent market behaviour, in our view, is more in-line with the Benjamin Graham quote: "In the short run, the market is a voting machine, but in the long run, it is a weighing machine."
- **Valuation:** The Nifty 50 Index trades at ~18.5x 1-year forward net profits compared to a 12-month peak of 22x and 12-month low of ~17x.

India's medium to long term growth prospects likely to remain fairly positive. Hence, investors looking to add fresh investments may benefit from correction in the markets by investing in Hybrid funds and/or Large Cap-oriented funds or allocate via SIPs (Systematic Investment Plan).

DEBT UPDATE

Executive Summary

- Inflation across globe remains elevated.
- Amid higher for longer rate environment markets anticipate a bumpy path to disinflation.
- Commodities witnessed mixed change in prices.

The optimism that drove equity market up and global bond yields down ebbed in Feb-23. Data from around the world pointed to economies and labor markets facing little in the way of relief from high inflation. The concern now is less about a global recession and more over the prospect of little respite any time soon from higher interest rates.

Amid this, India's quarterly growth trends indicate that there is slowdown, and it is more widespread in the economy. Also, with more rate hikes on the cards, yields might remain under upward pressure. With large uncertainty on certain key macro variables like inflation and interest rates, the road ahead for Indian Fixed Income space looks bumpy.

Global Macros

The biggest driver of fixed income markets over the last year has been the steady, upward recalibration of expectations for the terminal level of the US Fed's policy rate. The latest round of inflation data surprised on the upside, and contained trends that point to higher for longer policy. As inflation pressures persist through much of the U.S. economy. FOMC members have reiterated their commitment to raise rates until inflation is under control. Leading indicators point to core inflation to remain sticky. US payroll data revealed persistent tightness in labor markets (non-farm payrolls: 517k vs 260k, Jan-23 vs Dec-22) and elevated wage growth (7.86% vs 6.95%, Jan-23 vs Dec-22). Followed by the Consumer and Producer Price Index (CPI: 299 VS 297 points, Jan-23 vs Dec-22) showing higher than expected inflation. Combined with the upward surprise in Personal Consumption Expenditure data (PCE: 4.7% vs 4.6%, YoY Jan-23 vs Dec-23), the rate cuts expectations are less likely in the near future.

Lingering inflation and fears of higher interest rates lifted the 10Y US treasury (UST) yield above 4%, marking a fresh acceleration for a historic bond market rout. Even as the 10Y UST yield climbed, the 2Y treasury yield, which is sensitive to US Fed rate expectations, raced higher even faster as Feb-23 end it was around 4.9%. The US treasury yield is looking at an inverted yield curve scenario. This indicates that bonds of longer maturity are providing a lower yield, reflecting probability of looming recession. The inversion indicates that with strong economic data rolling in, the US Fed's target rate could be above 5% at the end of Dec-23.

In currency markets, the U.S. Dollar index, measuring its value against a basket of major peers, gained 0.6% at ~\$105 as on Feb-23 end. The index is up about 1.5% for the YTD 2023, but still down from Sep-22 high of around \$114. The Euro lost 0.75% and the British Pound dropped 0.8% against USD in Feb-23.

International energy and commodity markets face more uncertainty as Russia escalates its war in Ukraine, raising concerns of ongoing supply risks, sanctions and volatile prices. Among commodities, Coal and Natural gas declined the most from Dec-22 to Feb-23. However, that could change in coming months as demand for LNG may pick up in Asia, particularly in China with lifting of its Covid-19 restrictions, which stifled domestic demand throughout 2022.

CENTRAL BANK CHATTER

Policymakers in Europe and the US look set to press on with rate hikes amid a bumpy path to disinflation.

Our job is clear: our job is to make sure we restore price stability, which is truly the foundation of a strong economy."

New York Fed President John Williams, 22 February 2023

I think it is possible that we will have reached the terminal rate by summer [...] which officially ends in September."

ECB Executive Board Member and Bank of France Governor François Villeroy de Galhau, 17 February 2023

I believe that more tightening is needed, and caution that a pivot is not imminent [...] a preponderance of turning points is not yet in the data."

BoE MPC Member Catherine Mann, 22 February 2023

Given the current level of policy rates and the level and persistence of underlying inflation, a rate hike by 50 basis points is necessary under virtually all plausible scenarios in order to bring inflation back to 2%."

ECB Executive Board Member Isabel Schnabel, 15 February 2023

For Exports & CPI Data Released in Feb'23 for Jan'23 2023. Source: MOSPI

Domestic Macros

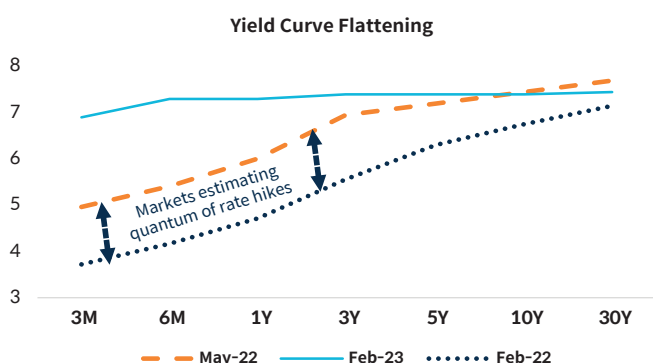

Wholesale Price Index (WPI) was at 4.73% in Jan-23 (year on year-YoY basis) while it was 4.95% in Dec-22 (YoY basis). The Consumer Price Inflation (CPI) data for Jan-23 inflation was at 6.52%. This was an upward surprise in inflation over Dec-22 which was at 5.72% (YoY basis). Jan-23 inflation was led mainly by higher food inflation, especially in cereals, while core inflation at 6.41% was higher by 9 bps from Dec-22. The trade deficit was narrowed to US\$17.7 bn. Led by a sharp fall in imports due to softening in domestic demand while exports fell by a smaller amount. Meanwhile, the services trade surplus improved from Dec-22 levels.

Commentary on Events

The month started with RBI increasing the repo rate by 25 bps with a 4-2 majority. Concerns of Monetary Policy Committee (MPC) remain on elevated inflation, especially core inflation while being optimistic on growth. The stance was kept unchanged at withdrawal of accommodation. The MPC highlighted upside risks to inflation from (1) adverse weather events, (2) global commodity prices given demand uncertainty and risk of supply disruptions, and (3) ongoing pass-through of input costs. Towards end of the month Q3 FY 23 gross domestic product (GDP) data was released which indicated growth momentum losing steam. India's real GDP grew 4.4% YoY in the Q3 FY23, slower than- 6.3% in Q2 FY23 and 5.2% in Q3 FY22. Demand momentum is expected to slow further, both at the domestic and global levels. The advanced economies may face slower growth in 2023 as their interest rates are already at decadal highs. They account for 45% of India's exports, which might bear the brunt of weaker demand.

Debt Outlook

Domestically, the transmission of the Reserve Bank of India's rate hikes has picked up since Dec-22, and key rates have either surpassed or reached close to the pre-pandemic 5-year average. The transmission is yet to be completed, which is likely to lead to a further rise in borrowing costs. The quantum of transmission is relatively higher in short end of the yield curve than in long end. As can be seen in month on month increase of 38 basis points (bps) in 3M CD, 31 bps in 1Y G-sec and 42 bps increase in 1Y AAA. Looking at higher duration counterparts of the same instruments, 1Y CD increased by 18 bps, 3Y G-sec by 27 bps and 3Y AAA by 14 bps. The flattening of the Yield Curve continues at the back of increasing repo rate.

How to read a Mutual Fund Factsheet?

Know how your money is managed

The benefits of investing in mutual funds are well known. However, buying them on face value is not enough. Investors should know how their money is managed. They should research as much as possible on a scheme's strategy, performance, risks involved and how the money is invested. Many investors shy away from this exercise as they consider it cumbersome. To make life easy for investors, mutual funds disclose a fund factsheet which details the quintessential information required before investing.

The factsheet is a concise document with a plethora of information about how the fund is managed; it is disclosed on a monthly basis. This article tries to decode the factsheet and explains how investors should use it for making investment decisions.

Five things to look out for in mutual fund factsheets

Basic information

The factsheet provides all the general information on the funds its objective or philosophy, options (growth or dividend), plans (direct and regular), net asset value (NAV) of each plan, minimum investment amount, systematic features (SIP, SWP, STP) and assets under management (AUM) data.

It is important to know about the fund's exit load, as it gets deducted from total gains if the investor exits during a specific period after investment. It is a small penalty charged on prevailing NAV to discourage premature redemption. Different schemes have different exit loads, while few such as Overnight funds generally do not have exit load. Some funds have a fixed exit load and some have a tiered structure. For instance, a fund may have nil exit load if the investor withdraws up to 10% of units per year. For units more than 10%, it charges 3% for exit before 12 months, 2% for exit before 24 months, 1% for exit before 36 months and nil after that.

Investors should look out for the fund's product labeling and riskometer. Product labeling underlines product suitability for investors. It tells about ideal investment time frame required to benefit from the fund and where it invests. Riskometer is a presentation that helps investors measure the risk associated with the fund. It presents six levels of risks - low, Low to Moderate, moderate, moderately High, High and Very High. Since an equity fund typically has high risk involved, needle of the scale points towards moderately high /high, suggesting the fund is meant for investors with a high risk-taking appetite. Examples of equity and liquid funds are listed below:

Equity Fund

Product Labeling

This product is suitable for investors who are seeking:

- Growth of capital in the long term
- Investment predominantly in equity and equity-related instruments

Riskometer

Debt Fund

Product Labeling

This product is suitable for investors who are seeking:

- Optimal returns in the short term
- Investment in portfolio of short duration money market and debt instruments

Performance aspects

Although the past performance does not guarantee future trend, investors can get a broad idea on how a fund may perform in future. This section looks at the fund's performance (lump sum as well as SIP) across time frames and compares it with the fund's benchmark and a

market benchmark. Many fund houses provide graphical representation of calendar year performance of funds along with standard SEBI prescribed performance tables.

Fund manager details

In an investment voyage, mutual fund is the ship and fund manager is the sailor. Success of the voyage depends on the manager's expertise. Hence, it is imperative to know the fund manager well.

The factsheet provides information on the manager's experience and qualification. You can find out their track record by reviewing the performance of all schemes managed by them.

Portfolio aspects

Key portfolio attributes to look for in equity/ hybrid funds

Asset allocation

It highlights the exposure to different asset classes - equity, debt and cash - in a portfolio.

The data used is for illustration purpose only.

Company and sector allocation

It informs investors about a fund's concentration level in sectors and stocks. An aggressive fund manager may have high concentration among fewer companies and sectors, which may not be appropriate for investors seeking diversification. Investors should check whether the fund has taken higher-than-prudent exposure to riskier sectors or low quality stocks.

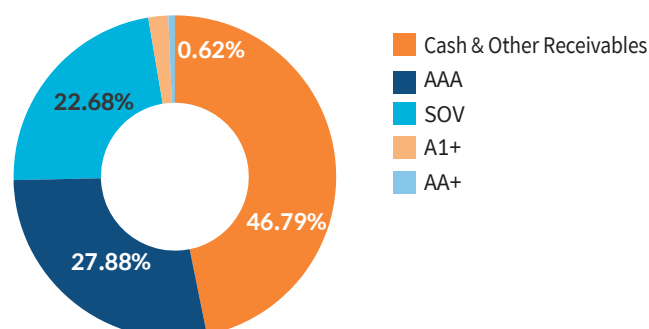

Key portfolio attributes to look for in debt funds

Credit quality profile

A debt fund's holdings are classified according to its credit ratings such as AAA, AA+, A1+ (given by credit rating agencies), etc.

Funds with higher exposure to AAA (top rated long-term debt) and A1+ (top rated short-term debt) have lower credit risk and higher credit quality.

Conservative investors should check whether the fund manager in order to boost performance is taking undue exposure to lower rated debt papers as they typically trade at higher yields but are exposed to high credit and liquidity risk vis-à-vis top rated papers.

The data used is for illustration purpose only.

Instrument break-up

It highlights allocation to various debt instruments such as commercial papers (CPs), certificate of deposits (CDs), NCDs and bonds, gilts and cash equivalents.

Investors in shorter maturity debt funds such as liquid, ultra short term, short-term debt funds should check whether higher proportion has been allocated to shorter maturity instruments such as CPs and CDs. As long-term debt instruments such as gilts and bonds are typically more sensitive to interest rate changes compared with CPs and CDs, higher exposure to former instruments by liquid or ultra-short term may result in high risk.

The data used is for illustration purpose only.

■ Sharpe Ratio:

Sharpe Ratio is a risk to reward ratio, it measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

■ Beta:

Beta of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measure the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

■ Standard Deviation:

A statistical measure that defines expected volatility/risk associated with a portfolio. This explains the variation/deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

■ Risk Free Return:

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

■ Indexation Benefit:

- | Long Term Capital Gains (holding period of over 3 years) from Debt Mutual Funds are taxed at 20% plus applicable surcharge and cess with the benefit of indexation.
- | Government notifies Cost Inflation Index (CII) for each financial year taking into consideration the prevailing inflation levels.
- | The cost of acquisition for computation of tax is adjusted for inflation using CII, thereby reducing the capital gains from tax perspective.
- | An investment made into a debt fund towards the end of a financial year (say, in March 2020) and held for a little over 3 years (say, in April 2023) would be eligible for application of CII over 5 financial years, resulting in 4 indexation benefit.

■ Total Expense Ratio:

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

■ Tracking Error:

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

■ Average Maturity:

Average Maturity of the securities in scheme.

■ Portfolio Yield (Annualized Portfolio YTM*):

Weighted average yield of the securities in scheme portfolio. *In case of semi annual YTM, it will be annualized.

■ Portfolio Turnover Ratio:

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

■ Modified Duration:

A formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration of portfolio can be used to anticipate the change in market value of portfolio for every change in portfolio yield.

■ Macaulay Duration (Duration):

Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

\$ For computation of since inception returns (%) the allotment NAV has been taken as ₹1000.00 for MACMF, MASF MAOF, & MAMMF and ₹10.00 for all other Schemes. In case, the start / end date of the concerned period is a non-business date (NBD), the NAV of the previous date is considered for computation of returns.
Returns (%) for less than 1 year calculated on simple annualized basis. The calculations of returns shall assume reinvestment of all payouts at the then prevailing NAV. CAGR - Compounded Annualised Growth returns. NAV (per unit) is at the end of the period.
**Standard benchmark prescribed as per the applicable SEBI circular. For MASF the returns are for Regular Savings Plan - Growth Option. Returns for others scheme are provided for Regular Plan Growth Option. Load is not considered for computation of return.
