Subject to SEBI (MF) Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages can vary substantially depending upon the perception of the Investment Manager; the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and for defensive consideration only. In the event of deviations, portfolio rebalancing will be carried out within 30 calendar days. Investment Strategy

The Scheme will primarily invest in equity and equity related securities.

The fund manager will follow a focused approach on the investments. The investments will be limited to maximum of 30 stocks. The fund has the flexibility to invest across market capitalization in large cap, mid cap and small cap category.

The focus would be to build a portfolio of strong growth companies, reflecting our most attractive investment ideas at all points of time.

The universe of stocks will comprise majorly of companies having robust business models, enjoying sustainable competitive advantages as compared to their competitors and have high return ratios.

The Fund Manager will create a robust portfolio to avoid concentration risk and liquidity risk. The Fund Managers will monitor the trading volumes in a particular stock before investment to avoid liquidity risk.

Covered Call Option

A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset.

Benefits of using Covered Call strategy in Mutual Funds:

The covered call strategy can be followed by the Fund Manager in order to hedge risk

thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits: a) Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option. b) Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction

On the day of Expiry of Options Contract if the stock price is more than 560	500*(560-stock price)	Loss on Call options would be such that price appreciation for 500 stock in the portfolio would be negated for the price above 560

The Scheme may take derivatives position based on the opportunities available subject to the guidelines issued by SEBI from time to time and in line with the overall investment objective of the Scheme. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under the SEBI Regulations. Covered call can benefit generation of income without added market risk. If we make a comparison between covered call and simply owning shares of stock, it demonstrates that income from added covered call discounts the basis in stock, thus reducing market risk.

The risk control measures for managing the equity portion of the scheme are:

Investments made from the net assets of the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Debt and Money Market Instruments and equity/ equity related instruments.

Risk Mitigation measures for investments in equity / equity related instruments

- This Scheme has a security concentration risk being a Focused Fund, however the Scheme endeavours to have a diversified equity portfolio comprising stocks across various sectors of the economy to reduce sector specific risks.
- The Scheme targets to maintain exposure across different market cap segments i.e. large, mid-cap and small cap. This shall aid in managing volatility and also improve liquidity.
- Any investments in debt securities would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk.

The Scheme will also invest in debt securities and money market instruments.

- The credit quality of the portfolio will be maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies.
- The investment team will primarily use a top down approach for taking interest rate view, sector allocation along with a bottom up approach for security/instrument selection.
- The bottom up approach will assess the quality of security/instrument (including the financial health of the issuer) as well as the liquidity of the security.
- Investments in debt instruments carry various risks such as interest rate risk, reinvestment risk, credit risk and liquidity risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document (SID) carefully for details on risk factors before investment.

The Scheme is subjected to risk factors associated with risks associated with Equity Investments, Unlisted Securities, Debt & Money Market Instruments, Derivatives, tax structure, Securities Lending etc.

Risk Control measures

Concentration Risk

The Scheme will try and mitigate this risk by investing in large number of companies so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.

Liquidity Risk

As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.

Risks Associated with Equity Investments:

The scheme has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.

Risk of investing in unlisted securities

As per SEBI guidelines, not more than 10% of the portfolio can be invested in unlisted securities. Rigorous due diligence is undertaken before any investments are made by the portfolio in unlisted securities, if any.

Risks Associated with Debt & Money Market Instruments

<u>Credit Risk</u> - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has implemented Quantis as the Front Office and Settlement System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same so as to act in a preventive manner.

The risk control measures for managing the debt portion of the scheme are:

- 1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.
- 2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.
- 3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analysed at regular intervals to take a call on the credit risk.
- 4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons.

The Scheme does not propose to underwrite issuances of securities of other issuers. There will be no exposure to securitized debt securities in the portfolio.
