The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Debt and Money Market Instruments and equity/ equity related instruments.

## Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document (SID) carefully for details on risk factors before investment.

The Scheme is subjected to risk factors associated with risks associated with Debt & Money Market Instruments, Risks associated with segregated portfolio, Risks associated with investing in Tri-Party Repo through CCIL (TREPS), Risks associated with investing in underlying schemes.

### Risk Control measures

The underlying schemes having exposure to the fixed income securities and/ or equity and equity related securities will be subject to the following risks and in turn the Scheme's/ Plans' performance will be affected accordingly.

#### **Concentration Risk**

The Scheme will try and mitigate this risk by investing in large number of companies so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.

#### **Liquidity Risk**

As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.

#### **Risks Associated with Equity Investments:**

The scheme has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.

#### Risks Associated with Debt & Money Market Instruments

<u>Credit Risk</u> - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

#### **Risk Mitigation measures**

- The FoF will invest in ETFs, which in cumulation will endeavor to have a diversified
  equity portfolio comprising stocks across various sectors of the economy to reduce
  sector specific risks. All the underlying ETF scheme related risk factors will apply to
  the Fund of Fund.
- Any investments in debt securities would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk.

The Scheme will also invest in debt securities and money market instruments.

- The credit quality of the portfolio will be maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies.
- The investment team will primarily use a top down approach for taking interest rate view, sector allocation along with a bottom up approach for security/instrument selection.
- The bottom up approach will assess the quality of security/instrument (including the financial health of the issuer) as well as the liquidity of the security.
- Investments in debt instruments carry various risks such as interest rate risk, reinvestment risk, credit risk and liquidity risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification.

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying

& measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has implemented MFund as the Front Office and Settlement System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same so as to act in a preventive manner.

The risk control measures for managing the debt portion of the scheme are:

- 1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.
- 2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.
- 3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analysed at regular intervals to take a call on the credit risk.
- 4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons.

The Scheme does not propose to underwrite issuances of securities of other issuers. There will be no exposure to securitized debt securities in the portfolio.

## Plans and Options
