The overall ceiling for investment in overseas ETFs that invest in securities is US $ 1 billion subject to a maximum of US $ 300 million per mutual fund. The Scheme intends to invest upto USD 50 million in overseas securities, subject to maximum limits as specified in per paragraph 13.11.2 of SEBI Master Circular for Mutual Funds dated March 20, 2026. Further investments in overseas securities will follow the norms for ongoing schemes. On an ongoing basis, the AMC is allowed to invest in overseas securities upto 20% of the average Asset Under Management ('AUM') in overseas securities of the previous three calendar months subject to maximum limit of USD 1 billion per Mutual Fund. Investment Strategy	The Scheme is an open-ended equity scheme following a contrarian investment strategy. It aims to generate long-term capital appreciation from a diversified portfolio of equity and equity-related instruments across market capitalisations and sectors. At the time of investment, a contrarian investment strategy seeks to spot situations where the market's prevailing sentiment has led to potential mispricing. These opportunities may emerge at the level of individual securities, sectors, themes, or broader market level. A contrarian strategy looks for situations where prevailing market sentiment has caused a security, sector or theme to be mispriced relative to its long-term fundamentals. The Scheme will primarily follow a bottom-up approach to stock selection, supported by a top-down view of sectors and market cycles. **Stock Identification Framework** When selecting stocks, the Fund Manager may consider the following factors. This list is indicative and not exhaustive: 1. Measurable out-of-favour signals: The Scheme will look for stocks under clearly negative sentiment, such as sharp price underperformance, earnings downgrades, low analyst coverage or falling institutional ownership.

2. Price well below fundamentals: The Scheme will prefer sound businesses trading near the low end of their own historical valuation range, where the gap between price and estimated fair value is widest.
3. Turnaround and cyclical recovery: The Scheme may invest in companies or sectors going through a turnaround, where margins, return ratios or earnings are below long-term averages but early signs of recovery are showing.
4. Growth at attractive valuations: The Scheme may invest in companies with sustainable growth that are trading at attractive valuations because of short-term concerns or market neglect.
5. A clear trigger for re-rating: The Scheme will seek to identify a trigger that can close the valuation gap, such as a management change, debt reduction, restructuring, regulatory resolution or corporate action.
6. Filtering out value traps: The Scheme will aim to avoid businesses in structural decline, or those with governance or balance-sheet concerns, regardless of how cheap they appear.
7. Selling discipline: Positions may be increased as the recovery shows up in reported numbers. They may be reduced or exited when the stock nears fair value, when market consensus catches up, or when the original reason for buying no longer holds.

The Fund Manager may consider any other factors that are relevant to the contrarian investment strategy and in line with the investment objective of the Scheme.

Portfolio Construction and Risk Management

The Scheme may invest across large, mid and small cap companies. At times it may hold a higher concentration in a particular market capitalisation, sector or stock, based on where contrarian opportunities arise. Liquidity, valuation and concentration risks will be monitored at both stock and portfolio levels.

- The Scheme may invest in money market instruments, including units of debt-oriented mutual fund schemes such as overnight, liquid and money market funds, within the limits set out in the asset allocation pattern. The AMC may consider ratings from SEBI-registered credit rating agencies when making these investments.
- The Scheme may use derivatives such as stock or index futures and options for hedging, portfolio balancing and other purposes permitted under the Regulations.
- The Scheme may invest in overseas securities, including ADRs and GDRs, subject to limits prescribed by SEBI/RBI from time to time.

The Scheme's investment approach will follow applicable SEBI guidelines, including the portfolio overlap conditions for contra funds. The AMC will aim to meet the investment objective while balancing safety, liquidity and returns. However, there is no assurance that the investment objective of the Scheme will be achieved.

To reduce the risk of the portfolio, the Scheme may also use various derivative and hedging products from time to time, in the manner permitted by SEBI.

To avoid duplication of portfolios and to reduce expenses, the Scheme may invest in any other scheme of the Fund to the extent permitted by the Regulations. In such an event, the AMC cannot charge management fees on the amounts of the Schemes so invested, unless permitted by the Regulations.

Investment in Derivatives:

	The Scheme may take derivatives position based on the opportunities available subject to the guidelines issued by SEBI from time to time and in line with the overall investment objective of the Scheme. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under the SEBI Regulations. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. For detailed derivative strategies, please refer to SAI. **RISK CONTROLS** Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has implemented Bloomberg as the Front Office and Settlement System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for pre-emptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyses the same so as to act in a preventive manner. The risk control measures for managing the money market portion of the scheme are: 1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark. 2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed. 3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analysed at regular intervals to take a call on the credit risk. 4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons. The Scheme does not propose to underwrite issuances of securities of other issuers. The Investment Manager endeavors to invest in InvITs, where adequate due diligence and research has been performed by the Investment Manager. The Investment Manager also relies on its own research as well as third party research. This involves one to one meetings with the managements, attending conferences and analyst meets and tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital

	structure, business prospects, policy environment, strength of management, responsiveness to business conditions etc. **Policy for Investment decisions** The investment policy of the AMC has been determined by the Investment Committee ("IC") which has been ratified by the Boards of the AMC and Trustee. At the strategic level, the broad investment philosophy of the AMC and the authorized exposure limits are spelt out in the Investment Policy of the AMC. During trading hours, the Fund Managers have the discretion to take investment decisions for the Scheme within the limits defined in the Investment Policy, these decisions and the reasons thereof are communicated to the CEO for post facto approval. The designated Fund Manager(s) of the Scheme will be responsible for taking day-to-day investment decisions and will inter-alia be responsible for asset allocation, security selection and timing of investment decisions. **Portfolio Turnover Policy** Portfolio turnover is defined as the aggregate value of purchases or sales as a percentage of the corpus of a scheme during a specified period of time. The Scheme is open ended, with subscriptions and redemptions expected on a daily basis, resulting in net inflow/outflow of funds, and on account of the various factors that affect portfolio turnover; it is difficult to give an estimate, with any reasonable amount of accuracy. However, during volatile market conditions, the fund manager has the flexibility to churn the portfolio actively to optimize returns keeping in mind the cost associated with it. For detailed derivatives strategies and illustrations, please refer to SAI.
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below: Since the Scheme has a contrarian style of investment, it might underperform the markets in scenarios of strong upward or downward cycles and its performance may differ from broader market performance. The Scheme seeks to generate returns out of identifying strategies and market segments that are likely to outperform in the future. This may or may not happen. The portfolio of Mirae Asset Contra Fund will comprise predominantly of Equity and Equity Related instruments. The Scheme can have concentrated exposure to some entities (weightage may be different from benchmark index). Hence, the performance of the Scheme can be different from the performance of the benchmark and the Concentration Risks are moderate. The scheme shall face the risk of misjudging the prospectus and valuations of a company. Since the Scheme will invest in companies, which are fundamentally sound having attractive valuations, the liquidity risk is moderate and may impact the Scheme if there is sudden large redemption. Some investments may also be made in Equity based derivatives such as Options and Futures, in which case, the risks associated with such Derivatives would be also be applicable. 1. Risks associated with investments in Equity and Equity related instruments 2. Risks Associated with Money Market Instruments/ Fixed Income Securities 3. Risks Associated with Derivatives 4. Risk associated with Covered Call 5. Risks associated with segregated portfolio
