The universe of stocks will comprise majorly of companies having robust business models, enjoying sustainable competitive advantages as compared to their competitors and have high return ratios. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under the SEBI Regulations

# Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document (SID) carefully for details on risk factors before investment.

The Scheme is subjected to risk factors associated with risks associated with Equity Investments, Risks Associated with Debt & Money Market Instruments, Risks

Associated with Derivatives, Risks associated with segregated portfolio, Risk Associated with Securitized Debt, Risk Associated with structured obligations and credit enhancement, Risk Factors Associated with Investments in REITs and InvITS, Risk associated with Securities Lending, Risk associated with short selling, Risks Associated with Repo in Corporate Debt, Risks associated with investing in Tri-Party Repo through CCIL (TREPS).

#### Risk Control measures

#### **Concentration Risk**

The AMC will mitigate this risk by investing in sufficiently large number of issuers spread across the sector so as to maintain optimum diversification and keep issuer/sector specific concentration risk relatively low.

#### **Liquidity Risk**

The Schemes will invest in debt instruments and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. The Schemes will however, endeavor to minimize liquidity risk by investing in securities having a liquid market.

#### **Risks Associated with Equity Investments:**

The scheme has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.

**Credit Risk** - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio

#### Risk Mitigation measures for investments in equity / equity related instruments

- The Scheme endeavours to have a diversified equity portfolio comprising stocks across various sectors of the economy to reduce sector specific risks.
- The investment team will primarily use a top down approach for taking interest rate view, sector allocation along with a bottom up approach for security/instrument selection.
- The bottom up approach will assess the quality of security/instrument (including the financial health of the issuer) as well as the liquidity of the security.

The Scheme will also invest in debt securities and money market instruments.

- Any investments in debt securities would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk.
- The credit quality of the portfolio will be maintained and monitored using inhouse research capabilities as well as inputs from external sources such as independent credit rating agencies.
- Investments in debt instruments carry various risks such as interest rate risk, reinvestment risk, credit risk and liquidity risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification.

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage

risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has implemented MFUND as the Front Office and Settlement System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for pre-emptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyses the same so as to act in a preventive manner.

The risk control measures for managing the debt portion of the scheme are:

- 1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.
- 2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.
- 3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analysed at regular intervals to take a call on the credit risk.
- 4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons

The Scheme does not propose to underwrite issuances of securities of other issuers.
