	Covered Call Option
	A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset.
	Benefits of using Covered Call strategy in Mutual Funds:
	The covered call strategy can be followed by the Fund Manager in order to hedge risk hereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits: a) Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent

Risk Control measures	Concentration Risk The Scheme will try and mitigate this risk by investing in large number of companies so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.
	Liquidity Risk As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.
	Risks Associated with Equity Investments: The scheme has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.
	Risk of investing in unlisted securities As per SEBI guidelines, not more than 10% of the portfolio can be invested in unlisted securities. Rigorous due diligence is undertaken before any investments are made by the portfolio in unlisted securities, if any.
	Risks Associated with Debt & Money Market Instruments
	Credit Risk - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.
	Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same so as to act in a preventive manner.
	The risk control measures for managing the debt portion of the scheme are:
	1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.
	2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.
	3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analysed at regular intervals to take a call on the credit risk.
	4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons.
	The Scheme does not propose to underwrite issuances of securities of other issuers. There will be no exposure to securitized debt securities in the portfolio.
