Ті	acking Error and Tracking Difference
Tr	acking error is defined as the standard deviation of the difference between the

Mutual Fund
daily returns of the Underlying Index and the NAV of the Scheme. Theoretically, the corpus of the Scheme has to be fully invested in the securities comprising the Underlying Index in the same proportion of weights as the securities have in the Underlying Index. However, deviations from the stated index replication may occur due to reason that the Scheme has to incur expenses, corporate actions pertaining to the Index including changes to the constituents, regulatory policies, ability of the Fund Manager to closely replicate the Underlying Index, delay in purchase or non-availability of underlying securities forming part of the index etc. The Scheme's returns may therefore deviate from those of its Underlying Index. Tracking Error may arise due to the following reasons:
Tracking error could be the result of a variety of factors including but not limited to:
 Delay in the purchase or non- availability of securities which are part of the Index Delay in liquidation of bonds which have been removed by the Index Due to timing of transactions either on RFQ platforms or in open market Due to investment in out of index investments such as Government securities, Repo in Government securities and TREPs Due to over-weight / under-weight investment in bonds of issuers at ISIN level which are part of the Index Due to mismatch in the weight of the issuers forming part of the Index and the Scheme throughout life of the Scheme. Change in asset allocation between the Index and the Scheme in the last year of the Scheme. Difference in valuation of underlying bonds by the Index Provider and AMC's valuation providers. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise Fees and expenses of the Scheme. The Scheme has to invest in the securities in whole numbers and has to round off the quantity of securities. Interest/Payout of Income Distribution cum capital withdrawal Option. Changes in the constituents of the underlying Index. Whenever there are any changes, the Scheme has to reallocate its investment as per the revised Index but market conditions may not offer an opportunity to rebalance its portfolio to match the Index and such delay may affect the NAV of the Scheme.
While the intent of the scheme is to track the performance of the underlying index by investing in the bond forming part of the index, due to issues pertaining to liquidity of the debt market in India, the SEBI has prescribed guidelines within which the passive scheme may manage the allocation in the bonds and issuers which may or may not form part of the index, with same or different weightages, in order to decrease the risk replication of the underlying index within the allowed range. This will result in fund portfolio different from the index portfolio with difference in the performance and volatility of the scheme.

	The annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period is higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any.				
Investment Strategy	 The fund is a passively managed index fund which will employ an investment approach designed to track the performance of Nifty SDL Jun 2027 Index. The Scheme will follow Buy and Hold investment strategy in which existing SDLs will be held till maturity unless sold for meeting redemptions requirement. The Scheme shall be considered to be replicating the underlying index, provided: The duration of the portfolio of Scheme replicates the duration of the underlying index within a maximum permissible deviation of +/- 10%. The following norms for permissible deviation in duration shall apply: For portfolio with residual maturity of greater than 5 years: Either +/- 6 months or +/- 10% of duration, whichever is higher. For a portfolio with residual maturity of up to 5 years: Either +/- 3 months or +/- 10% of duration, whichever is higher. However, at no point of time, the residual maturity of any security forming part of the portfolio shall be beyond the target maturity date of the Scheme. 				
	During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table. However, in case of maturity of SDLs in the Scheme portfolio, the reinvestment will be in line with the index methodology. Please refer SID for detailed Investment Strategy
