Mirae Asset Equity Allocator Fund of Fund

An open ended fund of fund scheme predominantly investing in units of domestic equity ETFs

The Mirae Asset Equity Allocator Fund of Fund seeks to provide investor with a broad exposure to large cap and midcap equity segments by investing in the units of ^large cap and midcap equity ETFs.

Here's why you should consider investing:

Passive and comparatively low cost exposure

Asset allocation with rebalancing predominantly in the units of large and midcap segment

Possibility of nominal alpha in long run

^Large cap – top 100 companies' Midcap101st – 250th companies.

EQUITY UPDATE

- Amid volatile sessions, the BSE-30 and Nifty-50 indices gained 6.1% and 6.6% in February. The BSE Mid-cap and BSE Small-cap. indices gained 10.5% and 12%. Among sector indices, the BSE metal index gained 24%, followed by power (+21%) and realty (+15%), whereas BSE FMCG (-2%) and IT (-1.6%) were the laggards.
- The month started on a positive note with the announcement of the Union Budget. Key benchmark indices gained 5% on February 1 as there was no change in tax rates, focus was on growth and increase in spending. Better-than-expected 3QFY21 results season also boosted investor sentiment. However, the market remained concerned about the sharp rise in bond yields and a sudden increase in Covid-19 cases in few Indian states.
- Global markets too were positive in February – S&P 500 gained 2.6%, Euro Stoxx 50 rose 4.5%, and MSCI Emerging Markets index was up 0.7%.

Global Macros

- The US 10 year bond yield expanded 33.9 bps during the month to end at 1.4%. The dollar index gained 0.3% to 90.9 at the end of February.
- Crude was up 18.3% MoM and was quoting at USD66/bbl on February 26th.

Domestic Macros

- Inflation:** (a) CPI inflation moderated to 4.06% in January as against 4.6% in December, but core inflation remained sticky at 5.65% as health, clothing, footwear, recreation showed signs of pressure, (b) WPI inflation in January increased to 2% from 1.2% in December
- Currency:** Rupee depreciated 70 bps to end February at INR73.5/USD
- Growth:** IIP in December grew 1% compared to (-)2.1% in November
- Trade deficit:** Trade deficit came in at US\$14.5 bn in January (from \$15.4 in December).
- Monetary Policy:** MPC kept policy rates unchanged while maintaining its accommodative stance with a promise of ample surplus liquidity. CRR limit was expectedly raised but in a step-up fashion from 3% to 4% by May 2021.
- State Elections:** More than ~180mn people will be eligible to vote in 5 upcoming assembly elections (Tamil Nadu, Kerala, West Bengal, Assam, & Puducherry) starting in March. The results will be announced on May 2nd.

Regulatory, policy and market developments

- Equity trading trends:** FIIs net bought equities worth USD3b and DIIs sold equities worth USD2.3b during February. For calendar year 2021, FIIs have net bought USD5b of equities and DIIs have net sold USD3.9b.
- GST:** January GST collections, collected in February, exceeded the INR1 tn mark for the fifth consecutive month supported by economic recovery and improved compliance. Based on the PIB release, total GST collection was at INR1,131 bn for January (7.4% yoy) compared to INR1,198 bn in December.
- Union Budget**
 - The FY22 Budget was presented in the backdrop of pandemic situation and thus increased fiscal deficit (9.5% for FY21 and 6.8% for FY22) can be justified. While the funding continues through higher borrowing, increased transparency via inclusion of some off-balance sheet items within the deficit number is positive with a glide path of 4.5% fiscal deficit by FY26. The government, while projecting moderate revenue growth, maintained its focus on infra capex (FY22 capex is 2x of FY18) and disinvestments.
 - FM's Budget Speech lifted market sentiments as it didn't raise / add any new tax and showed a clear intent and directional focus towards some of the important topics like Privatization, Manufacturing and Capex Push. Prioritizing Capex over Revenue Expenditure held the promise of creating more jobs and lifting long term growth potential.

- The revenue side of the budget builds in a 23% increase on the back of a 14.4% nominal GDP growth, higher custom duties (to boost local manufacturing), and a disinvestment target of Rs1.75 trillion. The increase in capex is being funded through borrowing, hence the gross borrowings are down only 6% to INR 12 trillion.

3QFY21 result summary

- The 3QFY21 results have maintained the 2QFY21 results momentum leading to earnings upgrades along with upbeat corporate commentaries. The Nifty 50 companies' EBITDA was up 20% YoY, 16% QoQ, while profits were up PAT 18.5% YoY, 19% QoQ.
- The better than expected result seem to be driven by festive season demand, cyclical sectors and continued cost optimization by corporates.
- Sectoral trends**
 - Private Banks:** Restructuring numbers were much lower than anticipated across the board – Banks, NBFCs, SFBs etc. Margins improved, while asset quality better than expected and collection efficiency at ~97%. Saw recovery in some retail products – Tractors, 2W, Housing, and Gold Loans.
 - NBFCs:** witnessed improvement across parameters in 3QFY21 – be it disbursements, collections, or margins. Gold financiers showed healthy performance, while divergent trend was seen in vehicle category.
 - Insurance:** Most life insurers reported growth in total APE (barring IPRU), led by Non-PAR, PAR, and Annuity. Protection growth moderated, while ULIP continued to be weak (although it witnessed sequential improvement).
 - IT:** Better than expected result trends, deal pipelines improved sequentially. Management commentary indicates faster digitization, cloud migration, Cybersecurity and IoT to drive the next leg of growth.
 - Healthcare:** Improvement in domestic formulation, steady US sales, lower opex and good demand for APIs.
 - FMCG:** Aggregate FMCG growth was ~10%+ YoY, almost 2x of growth seen during pre covid quarter. Such a large growth acceleration might also be on account of channel restocking before price hikes.
 - Consumer Durables:** Across the categories saw double digit vol growth led by positive consumer sentiments, pent-up demand, festive season and robust demand from smaller towns. Seeing renewed interest in home renovation. Also, sharp commodity inflation led to pre-buying by the channel prior to expected price hikes. Unorganised players continued to struggle with supply chain.
 - Telecom:** Better ARPU trends, stronger players gaining customers at the cost of weaker player.
 - Cement:** Saw stable realization, higher volumes (+10% YoY) leading to operating leverage and lower employee and other expenses.
 - Metals:** Led by global demand recovery and improved product mix, realization were higher in both, ferrous and non-ferrous.
 - Auto:** Overall volumes up 15% YoY, 14% QoQ. Tractors (+25% YoY), 2W (+14.5%), and PV (+8%) have been positive on a YoY basis, LC (+1%) was similar to last year. On the other hand, M&HCV (-5%) and 3W (-39%) saw moderation in decline and QoQ improvement. RM starting to hurt, but S,G&A still lower and working capital normalizing leading to debt reduction.
 - Oil & Gas:** Better than expected results led by inventory gains in OMCs, better marketing margins. With economy coming on track saw volume revival in CGDs.
 - Cap Goods:** The sector witnessed sequential recovery all across with strong margin improvement led by cost initiatives.
 - Utilities:** The results have been on expected lines given most companies have regulated model.

Source: Bloomberg, as on 28th February, 2021. For all the above data

Outlook

- As the economy opens up, we have seen corporate performance improving with market share gains for organized sector. The 3QFY21 results are better than expected and is resulting in earnings upgrades. Further, the government focus on fiscal expansion and capex spending augurs well to revive the long-anticipated private investment cycle.
- The budget, in our view augurs well for the equity markets, given the growth oriented approach. While there was no negative surprise on the tax front, we will continue to monitor the execution on disinvestment front.
- We believe that India is at a cusp of multi-year growth revival given multiple drivers which will lead to mean reversion in growth rates. These include low interest rates, acceleration in manufacturing exports, buoyancy in rural sector, consolidation toward stronger players, etc. Overall, we expect strong growth both in GDP as well as Profit / GDP in FY22 and FY23. Corporate Profit to GDP (%) at a consensus level is estimated to increase from 2.2% of GDP in FY20 to about 4 % of GDP in FY23E.
- Key things to watch would be (a) oil price trend, (b) monsoon and (c) pace and timing of reversal of some of the easing done by central banks due to pandemic situation.
- The consensus estimates indicate ~22% earnings CAGR in FY20-23 period driven by financials, energy, IT and consumer sectors. Nifty now trades at ~17.5x FY23 EPS.
- We would advise investors to not to time the market and invest in a disciplined way in equities for the long-term within their earmarked asset allocation (based on one's risk profile). In the current market scenario, staggered investments through SIPs or STPs would remain the best ways to invest in equities.

We would suggest to invest in a disciplined way in equities for long term, within the earmarked asset allocation (based on individual risk profile). In the current market scenario, staggered investments through SIP or STP, may be one of the best ways to invest in equities.

DEBT UPDATE

Global Markets – Taper-less tantrum

The global reflation theme is making a resounding comeback amid mega policy pump-priming, commodity upsurge and a V-shaped demand recovery. Last month started with yield spike and trend continued entire month across the globe. The drop-in infections and the rapid vaccination rollout continued to drive markets higher in February. The UK and US are progressing well with their vaccination programs and could achieve a large scale reopening of their economies in the second half of the year. However, virus mutations, such as the Brazilian and South African variants, could still potentially slow down the return to normality.

On the macroeconomic front, despite the need to maintain some social distancing measures, manufacturing surveys continue to show solid momentum (Euro Zone manufacturing PMI at 57.7 (Prev 54.8), UK manufacturing PMI at 54.9 (Prev 54.1), US manufacturing PMI at 60.8 (Prev 58.7)), aided by extended fiscal support, which is boosting demand for goods.

Month started with 10-year benchmark yield at 1.07% and spiked to maximum of 1.52% during the month and ended at 1.41%, a spike of 34 bps. Nominal bond yields have moved higher quite a bit, partly in response to the rise seen in inflation expectations and partly be the result of improving growth outlook led by fiscal/monetary support, and progress on the vaccination front. Also, market was expecting FED to increase the average maturity (WAM) of the bond but there was no comment from FED regarding that but the rise has been unsettlingly swift, accompanied by the dollar strength.

Main concern across the globe is inflation, as it is coming off from the trough and 5-year inflation swaps look to be going through the roofs. A market proxy for the anticipated annual inflation rate for the next half decade exceeded 2.5% for the first time since 2008 -- aided by climbing oil prices.

Spread between 10 years and 2years has widened during the month from 96 bps on 31st January to 128bps on month end. The major battle in US economy is between rates going higher super-fast and FEDs that's trying to keep the market stable. The FED seems to watch market for signs of structural stress or slowing economic forecasts to take action, while the recent treasury selloff appears due to improving economic outlooks causing investors to sell before any hawkish fed action in the future. As FED in its meeting indicates it will likely "take some time for substantial further progress to be achieved", highlighting that the policy is unlikely to change soon. called the discussion on tapering is "premature"; indicating that "substantial further progress" towards the FOMC's goals of labor market recovery and inflation of at least 2% is required for changing the asset purchase guidance.

In other part of the world, a small rise in new cases in China had led to some mobility restrictions during the New Lunar Year holidays that could moderate but not derail the strong V-shaped recovery. Markets were more concerned about the prospect of a dampening of stimulus measures to curb the risk from rising house prices. MoM CPI for January raised to 1.0% from 0.7% in December.

In Europe, February flash Manufacturing PMI strengthened to 57.7 (+2.9 pts) while the services index remained weak at 44.7 and February CPI remains at 0.9%. Consumer confidence improved only marginally though, confirming lingering uncertainty about the outlook. Though the market reaction to the new government focus on effective vaccination plan, new support to prevent Covid-19 related layoffs, and an effective plan to use the resources of the European Recovery Fund was favorable, with the spread between 10-year Italian and 10-year German government bond yields falling to 1%.

Indian Recovery in Growth

In the start of the month, The FY22 Budget was presented in the backdrop of pandemic situation. Budget Speech lifted market sentiments as it didn't raise / add any new tax and showed a clear intent and directional focus towards some of the important topics like Privatization, Manufacturing and Capex Push. Later, RBI infused further confidence in the markets by extending its support to the government. It kept the policy rates unchanged, maintained its accommodative stance and retained most of the liquidity measures, in a bid to absorb government's aggressive borrowing calendar.

Allocation to capital expenditure for current year is 4.40 Lakh crore (increase of 33% from last), Government has Rs 1 lakh crore to spend in this month of march on capital expenditure. For the next year as well Government has estimated Fiscal deficit at 6.8%. But the quality of fiscal deficit has improved with focus on capital expenditure which could support economy but at same time raise concern for inflation.

Mirroring the global trend, India's yields firmed up despite a dovish RBI. Indian sovereign bonds are poised for the biggest monthly decline in almost three years, as a global debt -market rout and surging oil prices added to worries about massive government borrowings.

While the rise in 10Y G-sec is more modest (30-40bps), rates along the medium end of the curve (3-5Y) have seen a much larger spike (90-100bps). Further, corporate bond yields have also increased across the tenor, mirroring government bond yields. This is despite a very accommodative RBI, large liquidity surplus (INR5-6tn) and, most importantly, a positive surprise on the inflation front (CPI inflation moderated to 4.06% in January as against 4.6% in December).

In the Money Market, 3 months T-bills started month with 3.35% and ended low at 3.22% touching high of 3.38%. 6-months T-bills started at 3.55% and ended at 3.47% touching high of 3.59%.

RBI announced two OMO from Budget till date of 100 bn and 150 bn, in which it bought longer-maturity bonds and sold similar amount of shorter-tenor debt. To ease the market's concern over higher borrowings, RBI reiterated his ample-liquidity stance, and announced to conduct at least 3tr rupees of open-market bond purchases in the fiscal year starting April 1. RBI has already started normalization of monetary policy without disruption overall market liquidity.

On macro economy front:

Economic parameters	Comments
Inflation	CPI inflation moderated to 4.06% in January as against 4.6% in December amid falling momentum. Food and beverages inflation moderated to 2.7% (3.9% in December). Core Inflation remained unchanged from December at 5.2%
WPI	WPI inflation in January increased to 2% (1.2% in December). While food inflation was at (-)2.8% ((-)1.1% in December), core manufacturing WPI inflation rose to 5.2% (4.3% in December) on the back of rising inflation in textiles (5.2%), chemicals (3.6%), and basic metals (14.5%).
IIP	IIP in December grew 1% (November: (-)2.1%) and by 7.8% on a sequential basis.
Fiscal Deficit	10MFY21 fiscal deficit was at 66.8% of FY2021RE. Gross tax collections for 10MFY21 fell 1% with direct taxes falling 10% and indirect taxes increasing by 8%. Corporate taxes fell 15%, income taxes fell 5%, GST fell 9%, customs duty grew 2% while excise duty grew 58%. Expenditure growth was at 11% with revenue expenditure growth at 8% and capex growth at 35%.
GDP	Real GDP in 3QFY21 grew 0.4% led by investment growth of 2.6%. Real GVA in 3QFY21 grew 1%. The NSO revised FY2021E GDP growth estimate to (-)8% ((-)7.7% in first advance estimate) implying 4QFY21 GDP growth of (-)1.1%. FY2021E GVA growth estimate was revised to (-)6.5% ((-)7.2% in first advance estimate). NSO's implied 4QFY21 growth is 2.5%.
GST collections	GST collections exceeded Rs1 tn for the fifth consecutive month, aided by economic recovery and compliance. Total GST collection was at Rs1,131 bn for January (7.4% yoy) compared to Rs1,198 bn in December. Gross GST collections up to 11MFY21 were at Rs10.1 tn-contraction of 9.9% over 11MFY20.

Source: Bloomberg, as on 26th February, 2021. For all the above data

Market Outlook

Covid situation across the world has improved over the month. India which has election in multiple states and festive season managed to bring down number of cases which were raising during the start of month. We believe that in three months a large part of population will be vaccinated.

Market is worried the global selloff and surge in oil prices may prompt the RBI to reverse its stance to neutral in the coming months, with some even calling for hikes early next year. But, if we look at current situation India growth outlook seems at track and there is huge FPI inflows, inflation is back in RBI bracket. This give RBI extra room to maintain its accommodative stance.

In view of quick growth bounce back, the central bank is likely to consider normalisation of the policy, which it has already indicated by restoration of cash reserve ratio (CRR) as well as by announcing liquidity operations. The high frequency indicators of the economy signal a bounce back. To support this, the Government announced large borrowings, and corporates are also expected to participate in this growth cycle thereby, creating a crowding-out effect. In summary, scaled-up borrowings by government and corporates may lead to rising yields and widening of spreads, proving a good opportunity for investors to lock in higher yields and attractive spreads.

How to read a Mutual Fund Factsheet?

February 2021

Know how your money is managed

The benefits of investing in mutual funds are well known. However, buying them on face value is not enough. Investors should know how their money is managed. They should research as much as possible on a scheme's strategy, performance, risks involved and how the money is invested. Many investors shy away from this exercise as they consider it cumbersome. To make life easy for investors, mutual funds disclose a fund factsheet which details the quintessential information required before investing.

The factsheet is a concise document with a plethora of information about how the fund is managed; it is disclosed on a monthly basis. This article tries to decode the factsheet and explains how investors should use it for making investment decisions.

Five things to look out for in mutual fund factsheets

Basic information

The factsheet provides all the general information on the fund – its objective or philosophy, options (growth or dividend), plans (direct and regular), net asset value (NAV) of each plan, minimum investment amount, systematic features (SIP, SWP, STP) and assets under management (AUM) data.

It is important to know about the fund's exit load, as it gets deducted from total gains if the investor exits during a specific period after investment. It is a small penalty charged on prevailing NAV to discourage premature redemption. Different schemes have different exit loads, while few such as Overnight funds generally do not have exit load. Some funds have a fixed exit load and some have a tiered structure. For instance, a fund may have nil exit load if the investor withdraws up to 10% of units per year. For units more than 10%, it charges 3% for exit before 12 months, 2% for exit before 24 months, 1% for exit before 36 months and nil after that.

Investors should look out for the fund's product labeling and riskometer. Product labeling underlines product suitability for investors. It tells about ideal investment time frame required to benefit from the fund and where it invests. Riskometer is a presentation that helps investors measure the risk associated with the fund. It presents six levels of risks - low, Low to Moderate, moderate, moderately High, High and Very High. Since an equity fund typically has high risk involved, needle of the scale points towards moderately high /high, suggesting the fund is meant for investors with a high risk-taking appetite. Examples of equity and liquid funds are listed below:

Equity Fund

Product Labeling

This product is suitable for investors who are seeking:

- Growth of capital in the long term
- Investment predominantly in equity and equity-related instruments

Debt Fund

Product Labeling

This product is suitable for investors who are seeking:

- Optimal returns in the short term
- Investment in portfolio of short duration money market and debt instruments

The data used is for illustration purpose only.

Performance aspects

Although the past performance does not guarantee future trend, investors can get a broad idea on how a fund may perform in future. This section looks at the fund's performance (lump sum as well as SIP) across time frames and compares it with the fund's benchmark and a

market benchmark. Many fund houses provide graphical representation of calendar year performance of funds along with standard SEBI prescribed performance tables.

The data used is for illustration purpose only.

Performance Report

Period	Returns (CAGR %)			Value of ₹10000 invested (in ₹)

Add. Benchmark Return (%) (S&P BSE Sensex)	9.95%	9.31%	10.19%	7.02%	16.72%

The data used is for illustration purpose only.

Fund manager details

In an investment voyage, mutual fund is the ship and fund manager is the sailor. Success of the voyage depends on the manager's expertise. Hence, it is imperative to know the fund manager well.

The factsheet provides information on the manager's experience and qualification. You can find out their track record by reviewing the performance of all schemes managed by them.

Portfolio aspects

Key portfolio attributes to look for in equity/ hybrid funds

Asset allocation

It highlights the exposure to different asset classes - equity, debt and cash - in a portfolio.

Company and sector allocation

It informs investors about a fund's concentration level in sectors and stocks. An aggressive fund manager may have high concentration among fewer companies and sectors, which may not be appropriate for investors seeking diversification. Investors should check whether the fund has taken higher-than-prudent exposure to riskier sectors or low quality stocks.

Key portfolio attributes to look for in debt funds

Credit quality profile

A debt fund's holdings are classified according to its credit ratings such as AAA, AA+, A1+ (given by credit rating agencies), etc.

Funds with higher exposure to AAA (top rated long-term debt) and A1+ (top rated short-term debt) have lower credit risk and higher credit quality.

Conservative investors should check whether the fund manager in order to boost performance is taking undue exposure to lower rated debt papers as they typically trade at higher yields but are exposed to high credit and liquidity risk vis-à-vis top rated papers.

The data used is for illustration purpose only.

Instrument break-up

It highlights allocation to various debt instruments such as commercial papers (CPs), certificate of deposits (CDs), NCDs and bonds, gilts and cash equivalents.

Investors in shorter maturity debt funds such as liquid, ultra short term, short-term debt funds should check whether higher proportion has been allocated to shorter maturity instruments such as CPs and CDs. As long-term debt instruments such as gilts and bonds are typically more sensitive to interest rate changes compared with CPs and CDs, higher exposure to former instruments by liquid or ultra-short term may result in high risk.

The data used is for illustration purpose only.

■ Sharpe Ratio:

Sharpe Ratio is a risk to reward ratio, it measures portfolio returns generated in excess to the investment in risk-free asset, for per unit of total risk taken. While, positive Sharpe ratio indicates, portfolio compensating investors with excess returns (over risk-free rate) for the commensurate risk taken; negative Sharpe ratio indicates, investors are better off investing in risk-free assets.

■ Beta:

Beta of a portfolio is a number indicating the relation between portfolio returns with that of the market index i.e. it measure the volatility, or systematic risk, of a portfolio in comparison to the market as a whole.

■ Standard Deviation:

A statistical measure that defines expected volatility/risk associated with a portfolio. This explains the variation/deviation from the average returns delivered by the portfolio. A higher standard deviation means higher volatility (risk) and a lower standard deviation means lower volatility.

■ Risk Free Return:

The theoretical rate of return of an investment with safest (zero risk) investment in a country.

■ 4 Indexation Benefit:

- I Long Term Capital Gains (holding period of over 3 years) from Debt Mutual Funds are taxed at 20% plus applicable surcharge and cess with the benefit of indexation.
- I Government notifies Cost Inflation Index (CII) for each financial year taking into consideration the prevailing inflation levels.
- I The cost of acquisition for computation of tax is adjusted for inflation using CII, thereby reducing the capital gains from tax perspective.
- I An investment made into a debt fund towards the end of a financial year (say, in March 2020) and held for a little over 3 years (say, in April 2023) would be eligible for application of CII over 5 financial years, resulting in 4 indexation benefit.

■ Total Expense Ratio:

Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

■ Tracking Error:

Tracking error indicates how closely the portfolio return is tracking the benchmark Index return. It measures the deviation between portfolio return and benchmark index return. A lower tracking error indicates portfolio closely tracking benchmark index and higher tracking error indicates portfolio returns with higher deviation from benchmark index returns.

■ Average Maturity:

Weighted average maturity of the securities in scheme.

■ Portfolio Yield (Yield To Maturity):

Weighted average yield of the securities in scheme portfolio.

■ Portfolio Turnover Ratio:

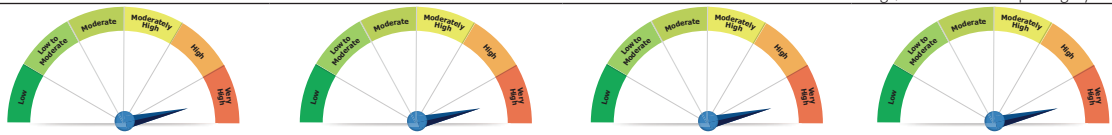

Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

■ Modified Duration:

A formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration of portfolio can be used to anticipate the change in market value of portfolio for every change in portfolio yield.

■ Macaulay Duration (Duration):

Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

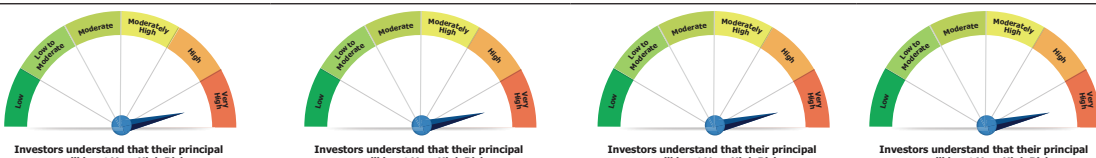

Key Features	Mirae Asset Large Cap Fund*	Mirae Asset Emerging Bluechip Fund	Mirae Asset Tax Saver Fund	Mirae Asset Focused Fund

Past Performance may or may not sustained in future.

\$ For computation of since inception returns (%) the allotment NAV has been taken as ₹1000.00 for MACMF & MASF and ₹10.00 for all other Schemes. In case, the start / end date of the concerned period is a non-business date (NBD), the NAV of the previous date is considered for computation of returns.

Returns (%) for less than 1 year calculated on simple annualized basis.

The calculations of returns shall assume reinvestment of all payouts at the then prevailing NAV. CAGR - Compounded Annualised Growth returns. NAV (per unit) is at the end of the period.

*Scheme Benchmark. **Alternate Scheme - Benchmark. For MASF the returns are for Regular Savings Plan - Growth Option. Returns for others scheme are provided for Regular Plan Growth Option. Load is not considered for computation of return.

Mirae Asset Equity Allocator Fund of Fund, Mirae Asset Ultra Short Duration Fund, Mirae Asset ESG Sector Leaders ETF, Mirae Asset ESG Sector Leaders Fund of Fund and Mirae Asset Banking and Financial Services Fund are in existence for less than 6 Month, as per SEBI regulation performance of the schemes has not been shown.
