How does Fund allocate assets in underlying ETF's?

The allocation in selected ETFs at all-time shall be reflective of the market condition. The allocation at no time shall change much from the current Market capitalization based weightage of the market cap segment/ ETF. The base case of the allocation is the free float market cap-based representation of NIFTY 50 Index, NIFTY Next 50 Index and Nifty Midcap 150 Index in Large and Midcap space. The over and under allocation is done in a range bound manner to preserve the fundamentally passive nature of the scheme.

The current limit of the over and under allocation is based +/- 10% of NIFTY 50 Index representation, which is then proportionally distributed between Nifty Next 50 Index and Nifty Midcap 150 Index also. As on January 31, 2023, NIFTY 50 Index had 73% representation in Large cap space and hence maximum allocation allowed to NIFTY 50 Index is 80% (73.3 % + 7.3%) and minimum allocation allowed is 66.5% (73.7% - 7.2%).

Parameters	NIFTY 50 Index	NIFTY Next 50 Index	NIFTY Midcap 150 Index

Based on relative premium/discount at which NIFTY 50 Index, Nifty Next 50 Index and Nifty Midcap 150 Index are, compared to their historical level, the allocation is done in the range bound manner. The NIFTY 50 Index at 73.29% has higher allocation by 0.67% whereas NIFTY Next 50 Index at 9.53% has lower allocation by 1.65% and NIFTY Midcap 150 Index has allocation of 17.53% in the equity allocator fund of fund.
