Outlook

Higher US real yields, Hawkish Fed and a stronger US dollar could act as headwinds for gold.

Central banks across emerging markets are expected to continue diversifying reserves, providing a supportive backdrop for gold over the medium term.

Over the next 6 -12 months, gold is expected to remain volatile driven by macroeconomic cues and geopolitical developments.

Short-term consolidation is likely due to lingering pressure from interest rates and investor positioning, the medium-term outlook remains positive, supported by central bank buying and macro uncertainties.

Post significant correction, current levels now looks reasonable from medium to long term view, with significant portion of the near-term headwinds already reflecting in the current prices.

With multiple supportive factors in play, the combined influence may continue to support the Gold performance
