I INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal
- As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the scheme can go up or down depending on various factors and forces affecting capital markets and money markets.
- Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee the future performance of the Scheme.
- The name of the Scheme does not in any manner indicate its quality or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1.00 Lac made by it towards setting up the Mirae Asset Mutual Fund.
- The present scheme is not a guaranteed or assured return scheme. In addition, the scheme does not guarantee or assure any dividend and also does not guarantee or assure that it will make any dividend distribution, though it has every intention to make the same in the distributions of Income Distribution cum Capital Withdrawal (IDCW) option. All distributions of Income Distribution cum Capital Withdrawal will be subjected to the investment performance of the Scheme.

Scheme Specific Risk Factors

Risks Associated with Debt & Money Market Instruments

Price-Risk or Interest-Rate Risk:

From the perspective of coupon rates, debt securities can be classified in two categories, i.e., Fixed coupon bearing securities and Floating coupon bearing securities. In Fixed coupon bearing securities, the coupon rate is determined at the time of investment and paid/received at the predetermined frequency. In the floating coupon bearing securities, on the other hand, the coupon rate changes – ‘floats’ – with the underlying benchmark rate, e.g., MIBOR, 1 yr. Treasury bill.

Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The prices of Government Securities (existing and new) will be influenced only by movement in interest rates in the financial system and liquidity. Whereas, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced not only by the change in interest rates but also by credit rating of the security and liquidity thereof.

Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds from regular coupon and principal payments on due date may get invested at a lower rate.

Credit Risk comprises three components.

- Default Risk

Securities carry a risk of repayment of principal or interest by the borrower. This is called as default risk. The default risk depends on micro economic factors such as financial soundness and ability of the borrower and macro economic factors such as industry performance, competition, trade barriers etc.

- Downgrade Risk

It is the risk that credit rating agency downgrades the rating of an issuer based on earnings and cash flows generating capacity. The credit rating migration of issuance leads to increase in the credit spread and thus reduces the price of corporate bond.

- Spread Risk

Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV of the Debt Schemes. Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV could fall.

Prepayment Risk

The Borrower may prepay the receivables prior to their respective due dates. This may result in a change in the yield and tenor for the scheme.

Liquidity Risk

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of these investments. Different segments of the Indian financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event it has to meet an inordinately large number of redemption or of restructuring of the Scheme's investment portfolio. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

Regulatory Risk

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

Risks Associated with Derivatives

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional instruments. Such risks include mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount.

Derivative products are highly leveraged instruments that require investment techniques and risk analyses different from those associated with traditional securities such as shares or bonds. Investment in derivatives also requires the maintenance of adequate controls to monitor the transactions entered

into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However the gains of an options writer are limited to the premiums earned.

The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. The loss can be unlimited as underlying asset can increase to any levels. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price and the loss is limited to strike price.

Investments in futures face the same risk as the investments in the underlying securities. The extent of loss is the same as in the underlying securities. However, the risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets.

Interest Rate Swaps (IRS) are highly specialized instruments that require investment technique and risk analysis different from those associated with equity shares and other traditional securities. The use of a IRS requires not only an understanding of the referenced asset, reference rate, or index but also of the swap itself, without the benefit of observing the performance of the swap under all possible market conditions. Swap agreements are also subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. Swap agreements may be subject to pricing risk, which exists when a particular swap becomes extraordinarily expensive (or cheap) relative to historical prices or the prices of corresponding cash market instruments. IRS agreements are also subject to counterparty risk on account of insolvency or bankruptcy or failure of the counterparty to make required payments or otherwise comply with the terms of the agreement.

The derivatives are also subject to liquidity risk as the securities in the cash markets. The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values.

The derivatives are also subject to liquidity risk as the securities in the cash markets. The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values. For further details please refer to section "Investments Limitations and Restrictions in Derivatives" in this SID.

Risk factors associated with instruments having special features

- The scheme may invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital. The instrument is also convertible to equity upon trigger of a pre-specified event for loss absorption as may be decided by the RBI.
- The debt instruments with special features are considered as Non-Convertible Debentures, may be treated as debt instruments until converted to equity.
- The instruments are subject to features that grant issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus debt instruments with special features are subject to "Coupon discretion", "Loss Absorbency", "Write down on Point of Non-viability trigger(PONV) event" and other events as more particularly described as per the term sheet of the underlying instruments.
- The instrument is also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

Risk associated with short selling

Short-selling is the sale of shares that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock he shorted and returns the stock to close out the loan. If the price of the stock has fallen, he can buy the stock back for less than he received for selling it and profits from it (the difference between higher short sale price and the lower purchase price).

However, Short positions carry the risk of losing money and these losses may grow theoretically unlimited if the price increases without limit and shall result into major losses in the portfolio.

In addition, the short selling will also have the risk of inability to borrow the securities by the seller. Then, it might be possible that the short seller will be required to purchase the securities sold short to cover the short even if the price of the security is higher at the time of the short sale.

If a stock starts to rise and a large number of short sellers try to cover their positions at the same time, it can quickly drive up the price even further. This phenomenon is known as a short squeeze. This might result in major losses in the portfolio.

Risks associated with segregated portfolio

- 1) Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- 2) Security comprises of segregated portfolio may not realise any value.
- 3) Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B. RISK MITIGATION MEASURES

Concentration Risk

The AMC will mitigate this risk by investing in sufficiently large number of issuers spread across the sectors so as to maintain optimum diversification and keep issuer/sector specific concentration risk relatively low.

Liquidity Risk

The Schemes will invest in debt instruments and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The Schemes will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.

Risks Associated with Debt & Money Market Instruments

Credit Risk - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.

Risks Associated with Repo in Corporate Debt

1) Illiquidity Risk

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. Therefore, to mitigate such risks, it has been

stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

2) Counter-party risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the schemes shall carry out repo transactions with only those counterparties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counter-party. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers. Similarly, in the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

3) Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security. ('AA' for long-term instruments/A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Triparty Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower. Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may

Overview of Debt Markets in India

Indian fixed income market, one of the largest and most developed in South Asia, is well integrated with the global financial markets. Screen based order matching system developed by the Reserve Bank of India (RBI) for trading in government securities, straight through settlement system for the same, settlements guaranteed by the Clearing Corporation of India and innovative instruments like Tri-party repo have contributed in reducing the settlement risk and increasing the confidence level of the market participants.

The RBI reviews the monetary policy six times a year giving the guidance to the market on direction of interest rate movement, liquidity and credit expansion. The central bank has been operating as an independent authority, formulating the policies to maintain price stability and adequate liquidity. Bonds are traded in dematerialized form. Credit rating agencies have been playing an important role in the market and are an important source of information to manage the credit risk.

Government (Central and State) is the largest issuer of debt in the market. Public sector enterprises, quasi government bodies and private sector companies are other issuers. Insurance companies, provident funds, banks, mutual funds, financial institutions, corporates and FPIs are major investors in the market. Government loans are available up to 30 years maturity. Variety of instruments available for investments including plain vanilla bonds, floating rate bonds, money market instruments, structured obligations and interest rate derivatives make it possible to manage the interest rate risk effectively.

- i. The AMC puts in sincere efforts to recover the investments of the segregated portfolio.
 - ii. Upon recovery of money, whether partial or full, it shall be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio.
 - iii. An Action Taken Report (ATR) on the efforts made by the AMC to recover the investments of the segregated portfolio is placed in every trustee meeting till the investments are fully recovered/ written-off.
 - iv. The trustees shall monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.
- b) In order to avoid mis-use of segregated portfolio, trustees will ensure to have a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including clawback of such amount to the segregated portfolio of the scheme.

Mandatory Swing Pricing Framework for market dislocation:

Swing pricing refers to a process for adjusting a fund's Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e. flows into or out of a scheme) to the investors associated with that activity. It is aimed at reducing the impact of large redemptions on existing investors by reducing dilution of the value of a fund's units.

Accordingly, mandatory full swing during market dislocation times shall apply as under:

- Swing pricing framework will be applicable only for scenarios related to net outflows from the schemes.
- Market dislocation will be determined by SEBI either based on AMFI's recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

- Thereafter, mandatory swing pricing will be applicable to Schemes which:
 - a. have ‘High’ or ‘Very High’ risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation); AND
 - b. classify themselves in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix.
- **Swing factor** as per below matrix shall be made applicable to the above mentioned schemes and the NAV will be adjusted for the swing factor.

Swing factor			
Max Credit Risk of the scheme→	Class A (CRV>=12)	Class B (CRV>=10)	Class C (CRV<10)
Max Interest Rate Risk of the scheme↓			
Class I: (Macaulay Duration <=1 year)	--	--	1.5%
Class II: (Macaulay Duration <=3 years)	--	1.25%	1.75%
Class III: Any Macaulay Duration	1%	1.5%	2%
*CRV – Credit Risk Value			

- Once swing pricing framework is triggered and swing factor is made applicable, both the incoming and outgoing investors shall get NAV adjusted for swing factor.
- Swing pricing shall be made applicable to all unitholders at PAN level with an exemption for redemptions upto Rs. 2 lacs for each scheme of MAMF.
- The scheme performance shall be computed based on unswung NAV.
- **Disclosures:** Disclosures pertaining to NAV adjusted for swing factor along with the performance impact shall be made by the AMC in the SID, Scheme wise Annual Reports and Abridged summary and on website prominently if swing pricing framework has been made applicable for the said mutual fund scheme.
- **Illustration:** Below is the example on how the swing pricing framework works, under which circumstances it is triggered and the effect on the NAV for incoming and outgoing investors:

Impact of Swing Pricing on incoming and outgoing unitholders/investors:

1. Unswung NAV – Rs.100/- (This is before applying the swing factor).
2. Mandatory Swing Factor - 1.50%
3. NAV after Adjustment of swing factor : $(100 - 1.5\% \text{ of } 100) = (100 - 1.50) = \text{Rs. } 98.50$

Subscription Amount	Rs.100,00,000/-
No of units to be allotted	$(100,00,000/98.50) = 101,522.843$
Redemption Amount	Rs.100,00,000/-
No of units to be redeemed	$(100,00,000/98.50) = 101,522.843$

Further, in line with the aforesaid SEBI circular, the inclusion of above-mentioned provisions pertaining to mandatory swing factor would not be considered as a Fundamental Attribute change. However, optional swing factor or higher than as specified in the Table above shall be considered as a Fundamental Attribute change of the Scheme in terms of Regulation 18(15A) of SEBI (Mutual Funds) Regulations, 1996.

D. WHERE THE SCHEME WILL INVEST?

Investment in Debt & Money Market Instruments:

The Scheme may invest in Money market instruments including, but not limited to Treasury Bills, Commercial Paper of Public Sector Undertakings and Private Sector Corporate Entities, Term Money, Tri-party repo, Reverse Repo, Floating and MIBOR Linked Instrument, Certificates of Deposit of Scheduled Commercial Banks, Financial Institutions and Development Financial Institutions, Government securities with unexpired maturity of one year or less and other Money Market securities as may be permitted by SEBI/RBI from time to time and in the manner prescribed under the Regulations.

The Scheme may also invest into debt securities including, but not limited to, debt Obligations of the Government of India, State and Local Governments, Government Agencies, Statutory Bodies, Public Sector Undertakings, Public Sector Banks or Private Sector Banks or any other Banks, Financial Institutions, Development Financial Institutions, and Corporate Entities.

The Debt Securities (including money market instruments) referred to above could be fixed rate or floating rate, listed, unlisted, privately placed or securitized debt securities, among others, transacted on an outright or repo / reverse repos basis, as permitted by regulation. The scheme may also invest in deposits of Scheduled Commercial Banks as permitted under Regulations / Guidelines. The Investment Manager will invest only in those debt securities that are rated investment grade by a domestic credit rating agency authorized to carry out such activity, such as CRISIL, ICRA, CARE, FITCH, etc. or in unrated debt securities upto permitted regulatory limits, which the Investment Manager believes to be of equivalent quality. Where investment in unrated debt securities is sought to be made, the specific approval of the Board of Directors of the AMC and Trustee shall be obtained prior to investment.

Credit Evaluation Policy

Credit risk management at MAMF is an independent function performed by the Risk Management (RM) team. The RM team sets up and monitors lending limits for each debt issuer. Issuer risk limits cover the quantum of exposure, maximum tenor and in some instances the type of instruments that can be purchased by the Investment Manager. An individual scheme's access to the issuer limit is dependent on its investment objectives, regulatory restrictions and assets under management. Risk limits for issuers are assigned and reviewed regularly at an internal investment Committee Meetings.

Credit evaluation process:

With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation process includes analysis of the operating and financial strength of the issuer as well as management and industry risk evaluation. For structured obligations, in addition to the above, the evaluation also covers originator analysis, collateral analysis, structure analysis and embedded risk analysis. Each credit proposal is discussed by an internal Investment Committee and a limit is assigned, if the issuer/structure is suitable. The AMC will also be guided by the ratings of Rating Agencies approved by SEBI for this purpose.

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has Front Office System (FOS) and that has incorporated all the investment restrictions as per SEBI guidelines and “soft” warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same so as to act in a preventive manner.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The fund will be managed according to the investment objective to generate consistent returns with a high level of liquidity in a judicious portfolio mix comprising of money market and debt instruments. The intention is to offer returns at lower level of risk while maintaining the liquidity profile.

The investment team will primarily use a bottom up approach with an importance to top down overlay to assess the quality of the security/instrument (including the financial health of the issuer) as well as the liquidity of the security and the impact of various macroeconomic policy changes such as monetary policy changes etc.

Investments in Certificates of Deposits and Commercial Papers carry various risks such as interest rate risk, reinvestment risk, credit risk and liquidity risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification. The Scheme does not propose to underwrite issuances of securities of other issuers. The Scheme will purchase securities in primary as well as secondary markets. The Scheme may also invest in securities offered by the issuer through private placements.

Policy for Investment decisions

The investment policy of the AMC has been determined by the Investment Committee (“IC”) which has been ratified by the Boards of the AMC and Trustee. At the strategic level, the broad investment philosophy of the AMC and the authorized exposure limits are spelt out in the Investment Policy of the AMC. During trading hours, the Fund Managers have the discretion to take investment decisions for the Scheme within the limits defined in the Investment Policy, these decisions and the reasons thereof are communicated to the CEO for post facto approval.

F. FUNDAMENTAL ATTRIBUTES

Following are the fundamental attributes of the scheme, in terms of Regulation 18(15A) of the SEBI (MF) Regulations:

(i) **Type of Scheme:**

An open ended liquid scheme. A relatively low interest rate risk and moderate credit risk.

(ii) **Investment Objective:**

The investment objective of the scheme is to generate consistent returns with a high level of liquidity in a judicious portfolio mix comprising of money market and debt instruments. The Scheme does not guarantee any returns.

(iii) **Asset allocation:**

Please refer to ‘Section II - C. Asset Allocation and Investment Pattern’ of this SID for details.

(iv) **Terms of Issue:**

(a) Listing:

The Scheme being open ended, the Units are not proposed to be listed on any stock exchange and no transfer facility is provided.

(b) Redemption of Units:

The Unit Holder has the option to request for Redemption either in amount in rupees or in number of Units. In case the request for Redemption specifies both, i.e. amount in rupees as well the number of Units to be redeemed, then the latter will be considered as the redemption request and redemption will be processed accordingly. The minimum redemption amount shall be ‘any amount’ or ‘any number of units’ as requested by the investor at the time of redemption request. The Trustees have authorized the AMC to suo-moto redeem such fractional balance units (less than 1 unit), on periodic basis across all schemes, as and when decided by the AMC. Units can be redeemed (sold back to the Fund) at the Redemption Price during the Ongoing Offer Period. If an investor has purchased Units of a Scheme on more than one Business Day the Units will be redeemed on a first-in-first-out basis. If multiple Purchases are made on the same day, the Purchase appearing earliest in the account statement will be redeemed first.

Redemption Price:

The Redemption Price of the Units is the price at which a Unit Holder can redeem Units of a scheme. It will be calculated as described below:

Redemption Price = Applicable NAV - (Applicable NAV x Exit Load*)

* Exit Load, whatever is applicable, will be charged.

Redemption Price will be calculated for up to three decimal places for the Scheme.

For example, if the Applicable NAV of a Scheme is Rs.10.555, and it has a 2% Exit Load, the Redemption Price will be calculated as follows:

Redemption Price = 10.555 - (10.555 X 2.00%) i.e. 10.455 - 0.211 = 10.344

If the Scheme has no Exit Load, the Redemption Price will be equal to the Applicable NAV.

The Securities Transaction Tax levied under the Income Tax Act, 1961, at the applicable rate on the amount of redemption will be reduced from the amount of redemption.

To illustrate:

If a Redemption of 4,900 units is sought by the Unit Holder at a Redemption Price of Rs. 10.344 (as calculated above), the redemption amount is Rs. 50,685.60. Securities Transaction Tax (STT) for instance is 0.001%. This will be further reduced by the STT of Re. 0.50 (i.e. Rs. 50,685.60 x 0.001%), making the net redemption amount Rs. 50,685.10.

If a Redemption of Rs. 10,000 is sought by the Unit Holder at a Net Redemption Price of Rs. 10.344 (as calculated above), which will give 966.744 Units; the effective redemption amount will be grossed up to Rs. 10,204.08 (i.e. $10,000 \div (1-2\%)$) and 966.744 units ($10,204.08 \div 10.555$) will be redeemed.

This is to ensure that the Unit Holder receives the net amount of Rs. 10,000 as desired.

Investors may note that the Trustee has a right to modify the existing Load structure in any manner subject to a maximum as prescribed under the Regulations and with prospective effect only. Please refer section - LOAD STRUCTURE.

- (v) **Aggregate fees and expenses charged to the Scheme.** Please refer, “Section VII. Fees and Expenses”
- (vi) Any safety net or guarantee provided - Not applicable.

Change in the fundamental attributes of the Schemes:

In accordance with Regulation 18(15A) of the Regulations, the Trustee shall ensure that no change in the fundamental attributes of the Scheme or the Fund or the fees and expenses payable or any other change which would modify the Scheme and affect the interest of the Unit Holders will be carried out unless:

- A written communication about the proposed change is sent to each Unit Holder and an advertisement is given in one English daily newspaper having nationwide circulation as well as in a Marathi daily newspaper with wide circulation published in Mumbai (as the head office of the Fund is situated there); and
- The Unit holders are given an option to exit for a period of 30 days to exit at the prevailing Net Asset Value without any exit load.

Further, before effecting any such change, the Trustees shall obtain comments from SEBI.

Fundamental attributes will not cover such actions of the Trustee of the Mutual Fund or the Board of Directors of the AMC, made in order to conduct the business of the Trust, the Scheme or the AMC, where such business is in the nature of discharging the duties and responsibilities with which they have been charged. Nor will it include changes to the Scheme made in order to comply with changes in regulation with which the Scheme has been required to comply.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the scheme will be benchmarked to the performance of the **NIFTY Liquid Index B-I**. The same has been chosen as the benchmark as the asset allocation pattern of the benchmark is in conformity with the declared asset allocation pattern of the scheme in the SID.

The above benchmark is in accordance with SEBI Circular no. SEBI/HO/IMD/IMD-II DF3/P/CIR/2021/652 dated October 27, 2021 on ‘Guiding Principles for bringing uniformity in Benchmarks of Mutual Fund Schemes’ and the list published by AMFI in this regard on Tier 1 benchmark for debt schemes.

The Trustees reserve the right to change the benchmark of the Scheme by suitable notification to the investors to this effect.

The performances of the schemes of the Mutual Fund are reviewed by the Investment Committee (“IC”) as well as the Board of Directors of the AMC and Trustee periodically. The IC is operational at the AMC level and has majority representation from the senior management of the company. Monthly reports on the performance of the schemes with appropriate benchmark indices are also sent to the Directors of the AMC and Trustee and also with the relative performance of the schemes of other mutual funds schemes in the same category which is placed with the Board of Directors of the AMC and Trustee. Further, in terms of SEBI circular no. MFD/CIR/16/400/02 dated March 26, 2002 the performance of the schemes will be benchmarked against the performance of respective benchmarks. Since the scheme is managed with no bias towards any theme, sector, market cap or style, a suitable benchmark indexes have been chosen as the benchmark.

The performance of the Scheme compared to its benchmark index will be reviewed at every meeting of the Board of Directors of the AMC and Trustee and corrective action as proposed will be taken in case of unsatisfactory performance.

In terms of SEBI circular no. MFD/CIR/01/071/02 dated April 15, 2002, the AMC and Trustee may change the benchmark index or select an additional benchmark index after recording adequate justification for carrying out such change. However, change of benchmark index and/or selecting additional benchmark indices would be done in complete compliance of the relevant guidelines of SEBI in this regard.

ii. Systematic Transfer Plan (STP)

This facility enables Unit Holders to transfer fixed sums from their Unit accounts in the Scheme to the existing schemes or other schemes launched by the Fund from time to time. The transfer will commence from the date mentioned by the Unit Holder in the Application Form for the facility. A minimum period of 7 days shall be required for registration under STP. The Units will be allotted / redeemed at the Applicable NAV of the respective dates of the Scheme on which such transfers are sought from the Scheme. In case the day on which the transfer is sought is a non-Business Day for the Scheme, then the application for the facility will be deemed to have been received on the immediately following Business Day. The facility of STP will not be available from any existing equity / equity oriented schemes to a non-equity scheme of the Fund. STP is not available for investments under lock-in period and for investments which are pledged.

Methodology:

The Unitholder has to ensure to maintain minimum balance in accordance with Plans selected in the Transferor Scheme on the transfer date / execution date under Systematic Transfer Plan.

In case of insufficient balance on the date of transfer in the folio, STP for that particular due date will be processed based on the clear balance available in the scheme. In such cases where STPs are processed due to insufficient balance, the criteria for minimum application amount in the transferee scheme shall not apply except in case of Mirae Asset Tax Saver Fund. However such residual transfer due to insufficient balance shall be done only once during the tenure of STP. For future STPs, in case the unitholder has sufficient balance, the amount as mentioned in the STP form shall be processed.

However, future STPs will continue to be active. This will help the investor to continue his STP facility seamlessly. Moreover, if the investor continues to have insufficient balance / unclear units for 3 consecutive months, the STP will be discontinued.

For details on Frequency and minimum applicable amount refer at the end of the VTP section.

Following are the features of Variable Transfer Plan (VTP):

- Under the Variable Transfer Plan, unit holders will be eligible to transfer:
Fixed Amount per installment OR the amount as determined by the following formula:-
[(Fixed amount to be transferred per installment X number of installments including the current installment) - market value of the investments through Variable Transfer Plan in the Target Scheme on the date of transfer] whichever is higher, on the date of transfer.
- The first VTP installment will be processed basis the fixed installment amount specified by the unit holder at the time of enrollment. From the second VTP installment onwards, the transfer amount shall be computed as per formula stated above.
- In case of VTP - Daily, Weekly and Fortnightly Interval, the commencement date shall be within 5 business days from the date of receipt of a valid request.
- For Daily, Weekly, Monthly, Fortnightly or Quarterly VTP falling on a Friday or on any business day where the next day is a non-business day, the NAV applicable shall be the Transaction date i.e. before 3.00 p.m. for both source and the target scheme.
- In order to discontinue the facility, a written request must be submitted at least 5 business days prior to the next applicable transfer date for the selected frequency.
- This facility introduced under the scheme will have the same investment objective, portfolio, liquidity and expense ratio as that of the prevailing plans of the respective schemes.

Example of Calculation of Installment of Variable Transfer Plan:

Source Scheme: Mirae Asset Savings Fund

Target Scheme: Mirae Asset Emerging Bluechip Fund

Suppose an investor chose a monthly VTP option from Mirae Asset Savings Fund to Mirae Asset Emerging Bluechip Fund of amount Rs.5000/- and he has already transferred three installments upto date August 1, 2015.

Total units allotted upto the date of last installment i.e. August 1, 2015 is assumed as 1400. The NAV of Mirae Asset Emerging Bluechip Fund - Growth Option on September 2015 is assumed as Rs.9.50 - per unit.

So the market value of investment on the date of transfer is 13,300 (1400 x 9.5). The next installment as per the VTP will be calculated as per the following formulae: Higher of the following, Fixed Amount to be transferred per installment (Rs.5,000/-) OR [(Fixed Amount to be transferred per installment * Number of Installment including current installment) - Market Value of Target Scheme) = (Rs.5000*4) - 13,300 = Rs.6,700/-. So Rs.6,700/- will be transferred under the VTP.

For details on Frequency and minimum applicable amount for SIP, STP and VTP refer the table below:

Facility	Frequency	Day/Date	Criteria*
STP and VTP	Daily	Monday to Friday	Minimum 5 Transfers of Rs.1000 each and in multiples of Re. 1/- thereafter.
	Weekly	Every Wednesday	
	Fortnightly	Every Wednesday of the alternate week.	
SIP	Monthly Quarterly	01st to 28th except the last three calendar dates 29th, 30th and 31st.	Minimum balance amount at the time of enrolment of STP and VTP: NIL
STP and VTP	Monthly Quarterly	01 st , 10 th , 15 th , 21 st and 28 th .	

***Notes:**

Each STP/VTP Installment 'OUT' to / of Mirae Asset Tax Saver Fund will be subject to a lock-in period of three years from the date of allotment of Units proposed to be redeemed. Hence, Mirae Asset Tax Saver Fund shall act as Source Scheme for STP/VTP post completion of the said lock-in period.

iv. Systematic Withdrawal Plan:

This facility enables the Unit Holders to withdraw sums from their Unit accounts in the Scheme at periodic intervals through a one-time request. The withdrawals will commence from the Start Date mentioned by the Unit Holder in the Application Form for the facility. A minimum period of 5 days shall be required for registration under SWP. The Units will be redeemed at the Applicable NAV of the respective dates on which such withdrawals are sought. However, if any of the dates on which the redemption is sought is a non-Business Day, the Units will be redeemed at the Applicable NAV of the next Business Day.

Options available and Minimum Amount Fixed withdrawal: Investors can withdraw fixed amount of Rs.1,000/- each and above at regular intervals.

For applicable load on Redemptions through SWP, please refer section 'LOAD STRUCTURE'.

v. Interscheme Switching

The Transaction Slip can be used by investors to make inter-scheme switches (during the NFO Period and the ongoing offer period) within the Fund. All valid applications for switch-out shall be treated as Redemption and for switch-in as Purchases with the respective Applicable NAVs of the Scheme / option.

vi. Intrascheme Switching

Investors can switch between different options under the same Plan of the Scheme, at the Applicable NAV. All valid applications for switch-out shall be treated as Redemption and for switch-in as Purchases with the respective Applicable NAVs of the option. As per current Load structure, no Entry or Exit Loads will be charged for intra-scheme switching. However, AMC may change the Loads prospectively as indicated in section on LOAD STRUCTURE FOR THE SCHEME in this Scheme information document.

vii. Switch facility from one scheme to another scheme

In the interest of investors, it is hereby clarified that where the switch request has been made from one scheme to another specifying the number of Units or Amount (during NFO as well as ongoing), the request will be processed for the corresponding value of such units or amount and that the allotment in the resultant scheme may be done in fractional units, subject to fulfillment of the minimum purchase amount of the scheme where it is being switched.

iii. Folio Number

Unless otherwise requested by the Unit Holder, a single folio number may be assigned if an investor invests in different schemes of the Fund, and a consolidated account statement will then be provided for investments in all the schemes.

ix. Fractional Units

Since a request for Purchase or Redemption is generally made in rupee amounts and not in terms of a fixed number of Units of the Scheme, an investor may be left with fractional Units. Fractional Units will be computed and accounted for up to three decimal places for the Scheme.

x. Consolidation of folios

In case an investor holds investments in multiple folios under the Fund, the AMC reserves the right to consolidate all the folios belonging to the same investor into one folio.

xi. Transaction through electronic mode

D COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

NAV of Units under the Options there under can be calculated as shown below:

$$\frac{\text{(Market or Fair Value of Scheme's investments + Current assets including Accrued Income - Current Liabilities and provisions including accrued expenses)}}{\text{No. of Units outstanding under the Scheme/Option.}}$$

The NAV and the sale and repurchase prices of the Units will be calculated and announced at the close of each working day. The NAVs of the Scheme will be computed and units will be allotted upto 4 decimals. The Fund also updates the NAV, Sale / Repurchase rates on AMFI /MF website on each business day. In addition, the NAV, Sale and Repurchase rates for all business days, will be available at our ISCs.

Computation of NAV will be done after taking into account dividends paid, if any, and the distribution tax thereon, if applicable. Therefore, once dividends are distributed under the Dividend Option, the NAV of the Units under the Dividend Option would always remain lower than the NAV of the Units issued under the Growth Option. The income earned and the profits realized in respect of the Units issued under the Growth Option remain invested and are reflected in the NAV of the Units.

Due to difference in time zones of different markets, in case the closing prices of securities are not available within a given time frame to enable the AMC to upload the NAVs for a Valuation Day, the AMC may use the last available traded price for the purpose of valuation. The use of the closing price / last available traded price for the purpose of valuation will also be based on the practice followed in a particular market. In case any particular security is not traded on the Valuation Day, the same shall be valued on a fair value basis by the Valuation Committee of the AMC.
